

BUILT ON MICROSOFT 365

Microsoft can do **more** than you think

One configurable platform for projects, contracts, cases, quality and documents. Built into Microsoft 365 itself.

THE CHALLENGE

More systems. More data. Less clarity.

Documents, emails and data are exploding in volume, and complexity grows with them. When information spreads across inboxes, Teams channels and folders, keeping the overview becomes hard. Processes run manually, knowledge gets lost between departments, and employees spend more time searching than delivering.

Microsoft 365 gives you the tools. WorkPoint 365 turns them into a business platform, with structure, governance and automation built right in.

1

platform instead of many. WorkPoint brings projects, contracts, cases, quality and documents together in one place. Fewer systems to maintain, one overview to work from, and a solution that grows with the business.

Information scattered across inboxes, Teams and folders.

Time spent searching, not delivering.

Point solutions for individual business processes, creating silos and complexity.

THE SOLUTION

Five business areas. One platform. Same environment.

Where point solutions cover one need at a time, WorkPoint brings all your core business processes into one configurable platform, right inside Microsoft 365.

Document management and governance

One place for every document, with automatic metadata, version control and access management. Governance is built into the daily workflow, so compliance follows from day one.

Project management

Documents, emails, tasks and processes are gathered directly on the project. Fixed structures, approval flows and milestones ensure progress and control across teams.

Contract management

Manage the full contract lifecycle from creation to renewal. Automatic reminders follow deadlines, standard templates reduce errors, and integrated e-signature removes bottlenecks.

Case management

Gather all communication, documentation and decisions in one case folder, with granular permissions that ensure only the right people see and find relevant cases.

Quality management

Handle audits, deviations and quality documentation in fixed workflows with full traceability, so compliance becomes an integrated part of operations rather than a manual chore.

BUILT ON MICROSOFT 365

MICROSOFT NATIVE

WorkPoint **extends** your Microsoft investment with the **structure, governance and automation** that bring the business together.

Your data. Your environment. No silos.

Everything runs in your own Microsoft 365 tenant.

Your data never leaves the organization.

Employees stay in Outlook, Teams and Office.

No new tools to learn.

Security policies are inherited automatically.

One administration, one security layer.

Integrated AI makes data actionable.

Structured data is the foundation for Copilot and the next generation of AI.

One platform instead of many.

Fewer integrations, simpler operations, lower total cost.

NEXT STEP

See it **in action**

Book a demo and see how WorkPoint 365 creates clarity, progress and compliance, directly inside the Microsoft platform your organization already runs on. **We'd be happy to show you.**
